

# SE AIR KNIFE

## Technical Specification

### GENERAL

The SE series air knives are designed to effectively dry the strands during pelletizing in both compound and masterbatch application. Filled and reinforced materials require effective strand drying to minimize the residual moisture of the pellets, reduce dust and avoid premature wear of the cutting tools

**Additional benefits of the continual development of the SE family are:**

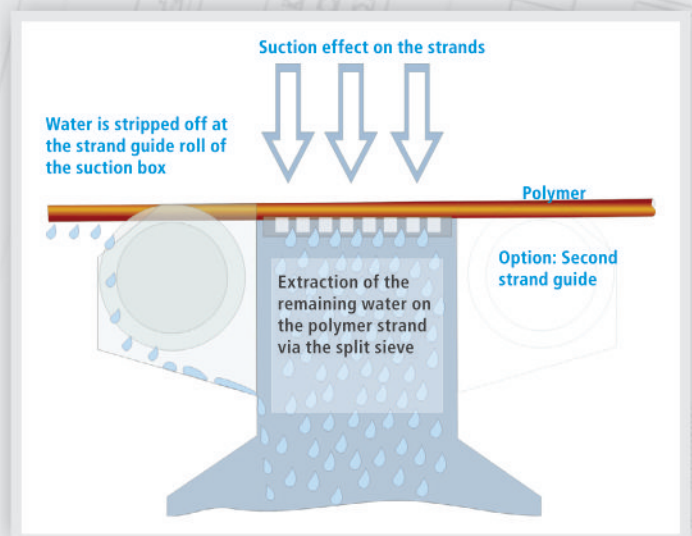

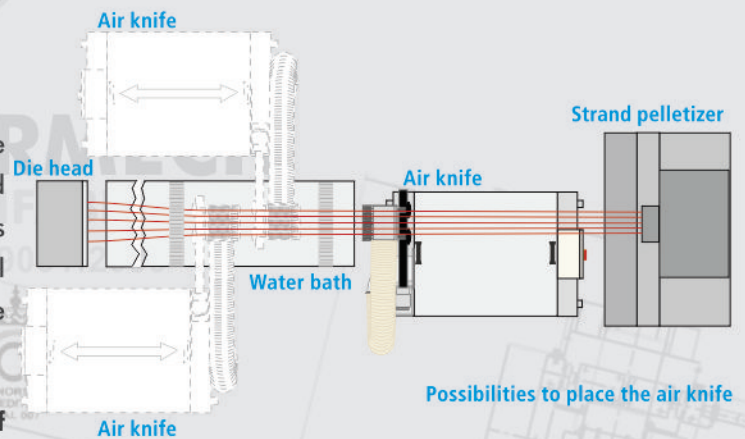

- ✓ Effective dehumidification of suction air
- ✓ Insensitive to dust and dirt
- ✓ Wear protection (optional)

The air knife SE allows very flexible and variable positioning of the suction box. Both height and inclination are adjustable, positioning above or behind the cooling trough.

### YOUR BENEFITS

- ✓ High suction power for low residual moisture values
- ✓ Dehumidification of suction air and water recirculation
- ✓ Targeted water return via pump
- ✓ Low sound emission < 80 dB(A)
- ✓ Short delivery times
- ✓ Easy start-up («plug & run»)
